"cDNA cloning of a novel human F-box protein.";

"cDNA cloning of a novel human F-box protein.";

Submitted (NOV-2001) to the EMBL/GenBank/DDBJ databases.

-i- FUNCTION: Probably recognizes and binds to some phosphorylated proteins and promotes their ubiquitination and degradation.

-i- SUBUNIT: PART OF A SCF (SKP1-CULLIN-F-BOX) PROTEIN LIGASE COMPLEX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FX16_HUMAN

-!- COFACTOR: Binds 1 zinc ion per subunit (Probable).
-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- TISSUE SPECIFICITY: EXPRESSED ON NEUTROPHILS AND MONOCYTES.
-!- SIMILARITY: Belongs to peptidase family M12B.
-!- SIMILARITY: Contains 1 disintegrin domain.
-!- SIMILARITY: Contains 1 disintegrin domain.
-!- DATABASE: NAME-PROW; NOTE-CD guide CD156 entry;

"The nucleotide sequence of Saccharomyces cerevisiae chromosome
L Nature 387:84-87(1997).
C -!- FUNCTION: THIS MAGNESIUM DEPENDENT ENZYME CATALYZES THE HYI
OF ATP COUPLED WITH THE TRANSPORT OF PHOSPHOLIPIDS (POTENTI
C LEADS TO NEOMYCIN-RESISTANCE WHEN OVEREXPRESSED.
C -!- CATALYTIC ACTIVITY: ATP + H(2)O = ADP + phosphate.
C -!- SUBCELLULAR LOCATION: Integral membrane protein.
C -!- SIMILARITY: Belongs to the cation transport ATPases family
C ATPases). Subfamily IV.

                                                                                                                                                                                                                                                    NCBI_TaxID=1309;
                                                          SUBUNIT: Monomer (By similarity).
SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
SIMILARITY: Belongs to the adenylate kinase family.
                                                                                             FUNCTION: This small ubiquitous enzyme is maintenance and cell growth.

CATALYTIC ACTIVITY: ATP + AMP = ADP + ADP.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ફ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human cytomegalovirus (hCMV) US2 protein, which has previously been shown to block the major histocompatibility complex (MHC) class I antigen presentation pathway, blocks the MHC class II pathway. The US2 protein does not have to be mutated to cause inhibition of the MHC class II pathway. The binding domain recognizes MHC I heavy chains, MHC II alpha Cc chains, and optionally DM-alpha chains. US2 has a double inhibitory effect on the MHC class II pathway, inhibiting recognition of cellular tissue by CD8-positive and CD4-positive T cells. US2 or its soluble variants, can be used to reduce inappropriate immune responses. The US2 protein can be used to improve the persistence of a virus. Vectors encoding soluble US2 protein (residues 28-143) can be used to treat CC autoimmune disease, especially where it is mediated by MHC II molecules. The vector can also be used to improve gene therapy, and preferably also contains a sequence encoding a therapeutic product. The protein is exogenously supplied or expressed from a recombinant cell, and can also be used to inhibit CD4-positive mediated immune responses, can be used to inhibit CD4-positive mediated immune responses, transplant immune responses and gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This is the human cytomegalovirus (hCMV) US2 protein, which has CC previously been shown to block the major histocompatibility complex (MHC) Class I antigen presentation pathway, blocks the MHC class II pathway. The US2 protein does not have to be mutated to cause inhibition of the CC MHC class II pathway. The binding domain recognizes MHC I heavy chains, CMHC II alpha chains, and optionally DM-alpha chains. US2 has a double call tissue by CD8-positive and CD4-positive T cells. US2 or its soluble variants, can be used to reduce inappropriate immune responses. CM Pottors encoding soluble US2 protein (residues 28-143) can be used to improve the persistence of a virus. CM treat autoimmune disease, especially where it is mediated by MHC II contains a sequence encoding a therapeutic product. The protein is exogenously supplied or expressed from a recombinant cell, and also be used to inhibit CD4-positive mediated immune responses, transplant immune responses and gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The ligand identified by the method of the invention is useful for the development of novel medicines and medicinal diagnostics. The present sequence represents the hydrophobic protein mellitin tag tag-Human beta2-adrenergic receptor EE used in the method of the invention.

The method of the invention is useful for identifying a ligand for hydrophobic protein such as a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a novel method for identifying a ligand for hydrophobic protein. The method comprises selecting a ligand molecule affinity selection by exposing a hydrophobic target protein bound by a amphiphile to a multiplicity of molecules to promote formation of at least a complex between the hydrophobic target protein and the ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying ligand for hydrophobic protein based on affinity selection which can operate in the presence of amphiphile without regard to the specific biological function of hydrophobic target protein -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Felsch
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    29-DEC-2000; 2000US-258970P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  19-DEC-2001; 2001WO-US50088
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          25-JUL-2002
